CICLO - RAS05 01-04-2011

ANTI-STATIC SMOOTHING

Smoothing cycle which can disperse the electro-static charges and avoid dangerous electrical discharges (ESD).

Preparation of the substrate

The Concrete Substrate must be solid, dry, levelled, absorbent, not polluted by oils, cleaners, dust or any other substance.

For new concrete substrate, the seasoning time must be respected.

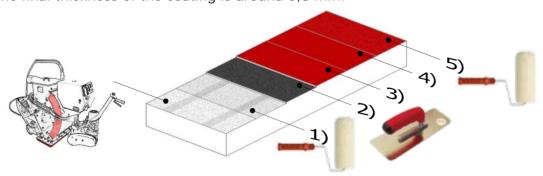

Choose the most convenient mechanical preparation: Grinding or Shot-Blasting.

As this is a non-transpirant cycle, verify the presence of a vapour barrier as humidity from ground up has to be avoided.

The cls substrate must have a resistance between 10.000 and 100.000 Ohm.

Application

- 1. The porosity of the substrate must be filled with a layer of **PAVIWATER T68**, applied by roll and diluted in the ratio of 1 to 3 with water, for a consumption of 0,050 kg/m² of A+B.
- 2. Smooth with a trowel the **SUPERCONDUPLAST**, added with 30% od **Quarzo B0**, for a consumption of SUPERCONDUPLAST of 0,40 kg/m².
- When necessary, seal the expansion joints with CONDUPLAST, added in the ratio of 1 to 3 with Quarzo B1 (very low consumption of product).
 Smooth with a trowel the CONDUPLAST, added with 30% of Quarzo B0, for a consumption of CONDUPLAST of 0,30 kg/m².
- 4. Apply by roll a layer of **COATING ESD**, for a consumption of 0,08 kg/m².
- 5. As top coating, apply by roll a layer of **PAVIWATER ANTISTATICO**, of the same colour used for the SMALTURA, for a consumption of 0,09 kg/m² of A+B.
- 6. The joints must be cut and sealed with the poly-urethane elastomer **SIGILFLEX**.
- 7. The final thickness of the coating is around 0,8 mm.

Products

PAVIWATER T68 A+B: waterborne transparent epoxy resin SUPERCONDUPLAST A+B: primer for anti-static coatings

CONDUPLAST A+B: anti-static self-levelling resin COATING ESD: waterborne anti-static coating

PAVIWATER ANTISTATICO A+B: waterborne epoxy top coating for anti-static covering

SIGILFLEX: elastomer sealer
